

Industrial Tech Grading Information

My intentions for Industrial Tech is to introduce students to various areas of industry and not to specialize in any one area. I also want the students to enjoy the class and not have to worry about homework.

While there will be a few quizzes, the only home work may be studying for an upcoming quiz. I furnish the students with the questions and the answers to any test in my area.

When it comes to grading I want you to be aware that if you come to my class or shop, you will have to work. If you come and do very little or nothing...you will fail.

I am not a hard grader but I will fail you for lack of work and/or poor and unsafe behavior.

You will be graded at least two times during the week: 1) You get a possible 30 points for character and 2) a quiz, drawing, handout, etc. that will be worth however many points depending on number of questions.

You can read the expectations for the class to learn about character points.

So at the end of the 9 weeks, I will add up your total points and divide by the total possible points to come up with your grade.

Example: 100 total possible
You get 75 points total.
That means you received a 75% for a grade.

Grades will be figured at Mid Term, Quarter, & Semester.
