

## **Power Mechanics (1 Semester)**

This course will give the students a basic understanding of internal combustion engines. It will not make professional mechanics out of them. The basic understanding of small engines is important because the cost of repairing small engines is high and with the knowledge and skills learned through this course, the students will be able to do the maintenance and some repairs of various small engines they might own in the future.

This course will provide the knowledge and the skills for students that may want to go on to a technical school to specialize in Industrial Maintenance, Small Engine Repair, Outboard Motor Repair, Motorcycle Repair, or even Automotive or Diesel Repair.

**There is NO fee associated with this class unless student brings in his own engine and needs to order parts.**

Maximum Class Size: 16
