

Mr. Hamilton's Shop Students Build Shelves & Clothes Hanger Rods For Band/Chorus Trailer

The Band/Chorus trailer used to haul band equipment and uniforms for marching band competitions was in need of a better storage system. Mr. Newhard and Mr. Larson asked Mr. Hamilton if his shop classes might be able to construct some shelves and clothes hanging rods inside the trailer for better efficiency.

Since the Marching Band competitions were right around the corner, it was kind of a rush type situation. Mr. Hamilton took students from a few different classes to complete the job.

It was a great opportunity to teach the students how to build storage shelving, which I am sure everyone needs to do at some point in their life. Although it wasn't part of the immediate curriculum, it was a real-life experience which helped out another department within our school.

Here are some pictures of the work completed in the trailer:

Removable rods for hanging band uniforms. A full rod across the top and half rods below.

Here is Foster Harrison putting in a second full rod assembly. You can see the door on the right. There is a full rod in front and behind the door. There are two half-rods in front of the door as well.

Here is a picture of the shelves. Only 1 level of shelving towards the front and two levels towards the rear of the trailer.

This is a view of the rear of the trailer. You can see we assembled 2 shelves to the back of the trailer.

Here is a pic of side boards we attached to the trailer with eye hooks. Equipment can be stood up next to the side and fastened to the wall with cords.

Students who helped with the project:

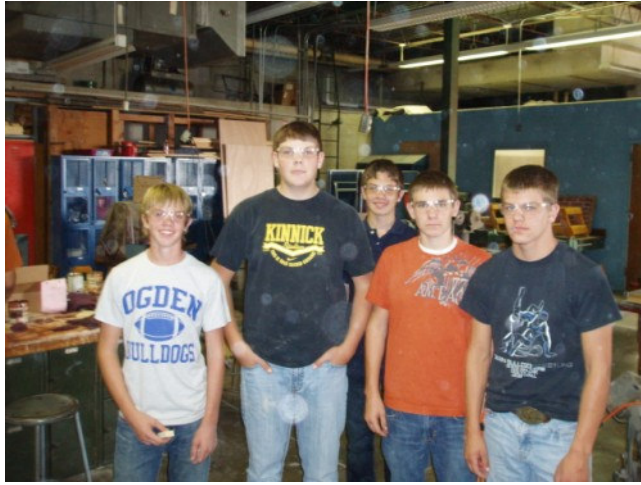

From Left to Right: Nick Katzenmeier, Austin Richmond, Foster Harrison, Garrett Cook, and Sam Clayton

From Left to Right: Nicholas Olerich, Nick Spears, Troy Shaw, Damian Davidson, and John Brown
